Research in Progress Meeting

Building mCARES—mobile technology to Improve Adherence among Women with HIV

The evolution of the formative work for a multilingual, mHealth intervention to support women living with HIV will be presented. An overview of the study findings, to date, gaps in the literature regarding HIV mHealth interventions and ethical and practical considerations when designing applications for special populations will also be discussed.

Dr. Duthely’s research focuses on improving health outcomes for minority women. Her research interests are in understanding the interplay between individual-level barriers, like HIV stigma, and facilitators, such as resiliency, to adherence to care among African American, Caribbean and Latina women living with HIV. This is foundational for a strengths-based approach to design, adapt and implement education and technology-based solutions to support adherence to care.

Lunthita Duthely, EdD, MS
Assistant Research Professor
Dept. of Obstetrics, Gynecology and Reproductive Sciences

Wednesday, November 11th, 1:00 – 2:00 PM
